BFM consolidates its presence in Asia Lines for FFS bags in Indonesia and Malaysia Technology - Wednesday, 24 July 2019

By delivering two complete, high-productivity lines for FFS (Form, Fill, Seal) bags, installed in Indonesia and Malaysia respectively, BFM consolidates its presence in the Asian market.

The lines for FFS bags developed by the Italian manufacturer consist of a motorized unwinder for 1500 mm diameter reels, a Stack type 2-, 4- or 6-colour Flexo printing machine with an 800 mm-wide table, an embossing and gusset unit, and a single-station automatic winder.

The rewound 1500 mm diameter reels are then fed to bag filling and sealing machines or to automatic sealing lines for the manufacturing of single bags, thus closing the production cycle.
